3rd – 5th Grade

Tree Level – \$80

Includes 1 Activity with:

- Activity Pages with instructions, suggested vocabulary, driving questions, and more
- Pre-activity video
- Post-activity video

Available Activities: Choose 1

Ecoregion Roundup – Learners evaluate an assigned flora or fauna species to identify their adaptations, then use critical thinking to match their species to the correct ecoregion and share their findings.

Backyard Biodiversity – Learners head outside with a paper and pencil to discover the biodiversity (or lack thereof) all around them! Learners will learn the importance of biodiversity and discover specific actions they can take to increase biodiversity in their own ecosystem.

Groundwater – By testing the soil and rock that surrounds them, learners will discover what groundwater is, ways to protect it, and why it is vital to countless ecosystems around the world.

Create Your Own Herbarium Specimen – Learners will virtually explore the BRIT's herbarium of over 1.5 million plant specimens to reveal its history and value in today's world. They will discover a new plant species and press and mount their own specimen.

Living Roof – Learners get exclusive access to behind the scenes footage of BRIT's Living Roof! They will learn about how the roof was built and the challenges faced by the botanists that helped create it. Learners will build their own Living Roof model and determine what makes it possible for plants to grow there.

Flower Dissection – Learners will discover and compare different types of flowers and collect their favorite flower to dissect. They will learn the function of each part of a flower.
